

The Geologic Maps Foundation (GMF) is leading a hiking and geologic field trip (geo-hikes) to the western 3/4s of Santa Cruz Island (Nature Conservancy portion), September 25-28, 2018 (Tuesday-Friday). Trip will provide the participants a good understanding of the terrain, beaches and geology of the island and some of the offshore too. In addition to the natural science educational value of the trip, this is a unique opportunity to see the largest portion of the island. You do not have to be

a geologist to attend but an eagerness to learn some basic geology and map reading skills are a must. GMF has reserved the Santa Cruz Island Reserve Field Station for 3 nights and 4 days. **For more info please go to: <https://www.meetup.com/Geo-hiking-trips-courses-Geologic-Maps-Foundation/events/254077154/>, Or contact Thom Davis, [geologicmapsfoundation@gmail.com](mailto:geologicmapsfoundation@gmail.com)**
